

WooCommerce Demo Website

Test Plan

Quality Assurance | v1.0 | June 2025

1. Introduction

This test plan defines the QA strategy, scope, milestones, and test cases for a WooCommerce demo e-commerce website. It covers six functional testing milestones from user authentication through order management. The objective is to verify that all core e-commerce flows operate correctly and deliver a smooth user experience. UI/UX issues identified during testing are logged directly in the bug report rather than tracked as separate test cases.

2. Objectives

- Validate all core e-commerce user journeys on the WooCommerce demo site.
- Identify and document defects across functional, UI/UX, data validation, and content areas.
- Ensure every milestone exits with a clear pass/fail verdict before the next begins.
- Provide a traceable record of test execution and outcomes.

3. Scope

3.1 In Scope

- Authentication (registration, login, logout, password reset)
- Product catalog browsing, detail pages, and image gallery
- Search functionality and product filtering
- Shopping cart operations (add, update, remove, totals)

WooCommerce Demo — Test Plan

- Checkout flow (guest and registered user)
- Order management (history, status, confirmation emails)

3.2 Out of Scope

- Live payment gateway processing (demo mode only)
- Third-party integrations (shipping APIs, ERP, CRM)
- Performance / load testing
- Security penetration testing

4. Milestone Overview

Milestone	Total TCs	Priority	Status
M1 - Authentication	24	High	Pending
M2 - Product Catalog	23	High	Pending
M3 - Search & Filtering	18	Medium	Pending
M4 - Shopping Cart	25	High	Pending
M5 - Checkout	38	Critical	Pending
M6 - Order Management	28	High	Pending

5. Test Environment

Item	Details
Platform	WooCommerce (demo website)
Browsers	Chrome, Firefox, Safari
Devices	Desktop (1920x1080), Tablet (768px), Mobile (375px)
Test Data	Demo products, test user accounts, sample orders
Test Management	Manual tracked in this document
Defect Tracking	To be logged per team process

6. Entry & Exit Criteria

6.1 Entry Criteria

- Demo WooCommerce site is accessible and stable.
- Test accounts and demo data are in place.
- Test cases for the milestone are reviewed and approved.

6.2 Exit Criteria

- All test cases for the milestone are executed.
- Zero open Critical or High defects (or all are documented with approved waivers).
- Test results are recorded and signed off by QA lead.

M1 — Authentication

Validates user registration, login, logout, and password recovery flows on the /my-account/ page.

M2 — Product Catalog

Validates product listing, detail pages, categories, and image display.

M3 — Search & Filtering

Validates the search bar, keyword results, filtering, and sorting behaviour.

M4 — Shopping Cart

Validates add, update, remove operations and cart total calculations.

M5 — Checkout

Validates the end-to-end checkout flow for both guest and registered users.

M6 — Order Management

Validates order history, status display, and order detail views.

7. Risk and Mitigation

#	Risk	Likelihood	Impact	Mitigation Strategy
1	Demo store data may be reset or changed between test sessions	Medium	Test cases relying on specific products or orders may fail unexpectedly	Re-verify demo data at the start of each test session; recreate test accounts and orders as needed
2	Coupon-based free shipping is the only checkout method — limited payment coverage	High	Card payment and gateway error scenarios cannot be tested on this demo	Clearly mark payment-related test cases as out of scope; document the limitation in the test report
3	Demo site may experience downtime or slow performance	Low	Test execution is blocked or results are unreliable	Schedule testing during off-peak hours; retry failed cases before logging a defect
4	Browser compatibility differences cause inconsistent UI rendering	Medium	A defect visible in one browser may not reproduce in another	Execute UI/UX test cases across Chrome, Firefox, and Safari; log browser version with every defect
5	Demo environment may not reflect a real production WooCommerce configuration	Medium	Findings may not accurately represent real-world behavior	Note all environment deviations in the test report; flag any findings that may be demo-specific
6	Tester unfamiliarity with WooCommerce admin or demo limitations	Low	Misidentified defects or missed test coverage	Conduct a brief orientation of the demo site before execution begins; review WooCommerce demo documentation

8. Defect Classification

Severity	Definition	Example
Critical	Blocks core user journey; no workaround	Checkout throws 500 error; user cannot place any order
High	Major functionality broken; workaround is difficult	Cart totals calculate incorrectly; coupon crashes the page
Medium	Feature partially works; workaround available	Filter doesn't persist on refresh; product image missing
Low	Cosmetic or minor usability issue	Button slightly misaligned; typo in label text

9. Roles & Responsibilities

Role	Responsibility	Owner
QA Lead	Test plan ownership, milestone sign-off, defect triage	Ilori Sunday Ezekiel
QA Tester	Test case execution, defect logging, regression runs	Ilori Sunday Ezekiel
Developer	Defect resolution, fix verification support	Ilori Sunday Ezekiel
Product Owner	Acceptance criteria approval, final sign-off	Ilori Sunday Ezekiel

10. Sign-Off

The following parties confirm this test plan is approved and execution may begin.

Name	Role	Date
Ilori Sunday Ezekiel	QA tester	22-Jun-2026
